

C-2

FLOAT SWITCH

GENERAL FEATURES

As Ayvaz C-4's float moves along with fluctuation of the fluid inside the tank provides contact via micro switch when it reaches the activation point. Pumps, selenoid valves, motorized valves and alarms can be controlled efficiently, safely and continually via micro switches.

Installation

C-2 level switch should be mounted horizontally to the tank wall. To get high level contact device should be placed to desired higher section of the tank, for low level contact purposes place to desired lower section.

The C-2 has two switches. This promises low level alarm and pump start. Based on the requirement, single device can provide pump start/stop.
